Career Objective

Computer Science undergraduate specializing in Artificial Intelligence with strong foundations in Machine Learning, Data Structures, and Algorithms and hands-on experience in full-stack and AI-driven systems. Interested in building scalable, data-driven applications and seeking opportunities in software development and product engineering.

Education

Pranveer Singh Institute of Technology, Kanpur – B.Tech CSE (AI) Oct 2023 – Pursuing
Percentage: 76.6 (till 6th sem)

St. Lawrence School, Unnao – Intermediate (ISC) 2022
Score: 78.6%

St. Lawrence School, Unnao – Matriculation (ICSE) 2020
Score: 86.83%

Skills

Programming: JavaScript, Python, Java, C
Full Stack Development: React.js, Node.js, Express.js, MongoDB
AI/ML: Machine Learning, Natural Language Processing, TensorFlow, PyTorch
Core Concepts: Data Structures & Algorithms, DBMS, Operating Systems, OOP
Tools: Git, GitHub, VS Code
Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration, Adaptability

Projects

AI-Powered Healthcare Appointment Optimization System [GitHub] *Mar 2026 - Present*
React.js, Node.js, Express.js, MongoDB, Recharts, FastAPI, Machine Learning

- Built a full-stack healthcare system to optimize appointment scheduling and patient flow across healthcare systems, supporting multi-user interaction with both online and offline consultations.
- Designed intelligent slot allocation and queue management logic, reducing scheduling conflicts and improving operational efficiency.
- Developed interactive analytics dashboards using Recharts to visualize patient flow, wait-time trends, and appointment distribution.

Sentiment Analysis System [GitHub] *Oct 2025 - Dec 2025*
Python, NLP, TensorFlow, PyTorch

- Developed a sentiment analysis model to classify text into positive, negative, or neutral categories using NLP techniques.
- Applied deep learning models to improve classification accuracy on large-scale datasets.
- Performed data preprocessing including tokenization, stemming, and vectorization to enhance model performance.
- Evaluated model performance using accuracy metrics and optimized hyperparameters.

HandWave – Virtual Mouse Control System [GitHub] *Aug 2024 - Nov 2024*
Python, OpenCV, MediaPipe, TensorFlow

- Built a real-time virtual mouse system enabling touchless computer interaction using hand gesture recognition.
- Integrated MediaPipe for accurate hand tracking and OpenCV for real-time video processing.
- Implemented gesture-based controls for cursor movement, clicking, and scrolling.
- Optimized frame processing pipeline to improve responsiveness and tracking accuracy.

Certifications

Data Structures and Algorithms – Coursera (Amazon) Apr 2026
Data Analyst 101 – SimpliLearn (Microsoft) Sept 2025

Achievements

- Solved 200+ DSA problems during a 100-day LeetCode challenge.
- Explored real-world applications of NLP, Computer Vision, and predictive analytics through personal projects.
